## ON THE AIR ALIGNMENT

For alignment of all bands, the controls should be set as follows unless otherwise stated.

VOLUME set to maximum

BFO set to OFF

NOISE LIMITER set to OFF

STANDBY-MVC-AVC-CAL set to MVC

BANDSPREAD pointer set to SET MAIN TUNING

BAND SWITCH set to band being aligned

**I.F. ALIGNMENT.** See Figure 32.

### BAND A

#### .53mc to 1.9mc (broadcast band)

Connect an antenna to terminal 1 of TS-1 (marked ANT on the chassis). See section on antenna.

Plug the AC line cord in a 110 v. 60 cycle outlet.

At the low end of BAND A tune in a local broadcast station with the MAIN TUNING dial.

Insert the plastic tuning rod through the top of T-3 until it engages the bottom tuning slug. Adjust this slug for maximum volume, then adjust the top tuning slug for maximum.

Similarly adjust T-2, then T-1.

**NOTE:** L-1 to L-10 have been preadjusted at the factory. Only a slight adjustment will be necessary to peak these coils. These adjustments are made from the bottom of the chassis with the bottom cover attached.

### BAND A

At the HIGH END of the band, tune in a local broadcast station whose frequency of transmission is known.

Simultaneously adjust the MAIN TUNING and C-6 until the signal being received is loudest and at the correct location on the dial.

Tune in a known frequency at the LOW END of the band.

Simultaneously adjust the MAIN TUNING and L-6 until the signal being received is loudest and at the correct location on the dial.

Without changing the MAIN TUNING dial, adjust L-1 for maximum volume. Because of interaction between C-6 and L-6 it will be necessary to repeat these adjustments several times for best accuracy.

### BAND B

#### 1.8mc to 6.3mc (80 meters)

Rotate the ANTENNA control until it is almost counterclockwise.

Tune in station WWV at 5mc. In some areas, WWV can only be received at night.

Simultaneously adjust the MAIN TUNING and L-7 until WWV is loudest and the dial pointer reads 5mc.

Adjust L-2 for maximum volume.

### BAND C

#### 6mc to 14.4mc (20 and 40 meters)

ANTENNA control to center of rotation.

Tune to station WWV at 10mc.

Simultaneously adjust the MAIN TUNING and L-8 until WWV is loudest and the dial pointer reads 10mc.

Tune L-3 for maximum volume.

### BAND D

#### 11.5mc to 33mc (10 and 15 meters)

ANTENNA control almost fully counterclockwise.

Tune to station WWV at 15mc. WWV can be received best during the day.

Simultaneously adjust MAIN TUNING and L-9 until WWV is loudest and the dial pointer reads 15mc.

Tune L-4 for maximum volume.

### BAND E

#### 47mc to 54mc (6 meters)

ANTENNA control almost fully clockwise.

MAIN TUNING set to 6 METERS.

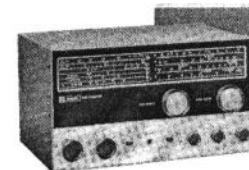

Rotate the BANDSPREAD to a strong signal of known frequency.

Simultaneously adjust the BANDSPREAD and L-10 until the signal is loudest and at the correct location on the BANDSPREAD dial.

Tune L-5 for maximum volume.

## ALIGNMENT WITH INSTRUMENTS

31

### BFO

STANDBY-MVC-AVC-CAL set to MVC

BFO set to ON

Tune to a strong signal on any band except the broadcast band (A).

As you rotate the BFO control a whistle should be heard. If not, adjust L-11 from the top of the chassis.

## ALIGNMENT WITH INSTRUMENTS

### EQUIPMENT REQUIRED

Voltmeter capable of reading down to 0.5 volts AC.

Signal generator with ranges from 530kc to 54mc. 30% modulation at 400 cycles.

300  $\mu\text{f}$  capacitor.

### SEE FIGURE 33.

Connect the coaxial cable to the generator as shown.

Connect one lead of the 300  $\mu\text{f}$  capacitor to the ANT terminal. Connect the other lead to the center conductor of the coaxial cable coming from the signal generator. Connect the shield wire of the cable to the GR terminal of the receiver.

Connect the leads of the voltmeter to the speaker terminals.

STANDBY-MVC-AVC-CAL set to AVC

NOISE LIMITER set to OFF

BFO set to OFF

**NOTE:** As the MAIN TUNING pointer is moved up scale, the ANTENNA control should be increased proportionately. That is, when the MAIN TUNING pointer is at the high end of the band the ANTENNA control should be almost fully clockwise (open); at the center of the band the ANTENNA control should be at mid-rotation; at the low end of the band the ANTENNA control should be almost fully counterclockwise (closed).

Follow the instructions on the alignment chart.

\*OPEN means clockwise.

\*\*CLOSED means counterclockwise.

\*\*\*Leave MAIN TUNING at 50 Mc and set generator at 46.8 Mc. An image of the tone heard at 50 Mc should be heard at reduced volume. If you cannot hear this image, L-10 is tuned incorrectly.
